PRECAUTIONS FOR USE

- Consult the product safety sheet, available in the documents of the article on www.premiumsanitary.eu

MANUAL

Usage Protocol

- Follow the instructions for using the NOCOTECH0 range diffusion device (see user manual and quickstart document).
- Shake the bottle before each use.
- Screw the 1L bottle onto the NOCOSPRAY dispenser or the 20L can into the NOCOMAX dispenser.
- Adjust the device to the volume (V) of the room.
For eXample : A room of 20m² with a height of around 2.50m will make a volume of 20 X 2.50m = 50m³
The device must then be set to 50m³.
- After the end of the diffusion, respect a contact time of 2 hours and ventilate the room for 10 minutes.
- Remove the bottle after use and close it.
- The treatment is to be repeated every 4 weeks.
If the space to be treated includes a bed, remove the mattress from the bed and place it on the mop before treatment.

IMPORTANT :

- During the entire operation of the machine and the contact time, leave the room closed and do not enter the room.
The treatment must be carried out without any human presence.
